

# Krane Setup

New Krane Tonearm for Majik LP12

INTERNAL USE ONLY

## Anti Skate Bias

Anti Skate Bias	Tracking Force	Position of Bias Screw
Minimal anti skate bias	10 - 15mN	See image 1
Medium anti skate bias	15 - 20mN	See image 2
Maximum anti skate bias	20mN and upwards	See image 3

## Tracking Force

Krane is supplied with an included stylus force gauge. See image 4.

Adjust the position of the counterweight and check the gauge with the stylus placed at the correct balance point for the tracking weight of your cartridge. The gauge will balance level with both ends off the surface of the vinyl when the tracking force is correct.

All Linn cartridges have a recommended starting tracking weight of 1.75gm. Adjust up or down using Tune Dem methodology.

## Cartridge Alignment

Krane features an adjustable headshell in order to correctly mount a wide range of cartridges. See image 5.

Using a Linn tonearm protractor - part number LBL 025/P or speedchecker disc - part number MISS 069/1 - ensure that the stylus aligns perfectly with the indicated 229mm setup point. Adjust if required.
